

ATOM

Modal Resonator

RRP £219

Wholesale £135

BLACK

WHITE

Atom is a modal synthesizer built on the Elements architecture — physical modelling synthesis that excites a bank of tuned resonant filters the way a bow, mallet, or breath excites a real string, plate, or tube. Bowed, blown, and struck exciters feed a 64-band resonator for tones running from plucked strings and bowed metal to alien, otherworldly textures. Where the Antumbra Atom redesign squeezed that same voice into a dense, fiddly panel, we rebuilt the interface from the ground up — a clean, simplified layout fitted throughout with full-size, all-metal potentiometers. Same physically-modelled voice, none of the clutter.

FEATURES

- Bow, blow and strike exciters with blendable mix
- 64-band modal resonator with Brightness and Damping controls
- Redesigned, simplified layout
- Full-size, all-metal potentiometers throughout
- Built-in stereo ambience reverb
- Elements architecture, reworked from the Antumbra Atom redesign
- FR4 fibreglass panel

SPECIFICATIONS

Format	Eurorack
Width	18HP
Depth	45mm
+12V Current	130mA
-12V Current	10mA

STOCKING & AVAILABILITY

Factory assembled PCB & SMT, THT hand finished and calibrated in Edinburgh, Scotland. Brand New. Ships tracked and insured within 1 business day. Enquiries: eastcoastmodular.co.uk
