

WORPS

Super Modulator

RRP £169

Wholesale £110

BLACK

WHITE

Worps is a meta-modulator — a module built around the idea of combining two audio signals in interesting ways. Feed it two oscillators, two voices, or any pair of audio sources and Worps will fold, crossfade, ring-modulate, and warp them together into something new. From subtle harmonic enrichment to full-on sonic destruction.

FEATURES

- 6 algorithms: crossfading, wavefolder, VCA, clipping, bitcrush, ring modulation
- Internal Macro-Oscillator — no second oscillator needed
- CV control over algorithm selection and modulation amount
- Aux input for additional modulation sources
- Bypass mode for clean signal routing
- FR4 fibreglass panel

SPECIFICATIONS

Format	Eurorack
Width	10HP
Depth	25mm
+12V Current	110mA
-12V Current	5mA

STOCKING & AVAILABILITY

Factory assembled PCB & SMT, THT hand finished and calibrated in Edinburgh, Scotland. Brand New. Ships tracked and insured within 1 business day. Enquiries: eastcoastmodular.co.uk
